Save up to 20% on Rego-Fix ER Collets

The REGO-FIX standard ER collet is the most widely used clamping system in the world. Originally created and patented in 1973 by REGO-FIX, it is ideal for a variety of machining applications including boring, milling, reaming, tapping and grinding. Unlike the Form A nominal diameter collets, Form B collets have a wide clamping range. With a short design profile and greater elasticity, the ER Form B collet offers tighter precision than competitor's collets when used with the REGO-FIX system.

We offer a variety of sizes starting at ER 8 through ER 50. This broad selection of ER collets can accurately clamp tool shanks ranging from .5mm (.0197") up to 34mm (1.3386") at the largest. Look for the ▲ on the top of your collet and be assured that you have a quality, Swiss Precision REGO-FIX product.

ER Collets are available in standard (ER) and ultra precision (ER-UP) accuracies.
